

LUCKY BOSS PORTAL

Revised Detailed Functional Specification – Laravel Website, Flutter App, AI Controls, Employer BYO-AI, Candidate Tables, Subscription Logic & Notifications

1. Project Objective

Lucky Boss Portal will be developed as a complete recruitment ecosystem with:

- Laravel Admin Portal
- Laravel responsive recruitment website
- Flutter Android application
- Flutter iOS application
- Shared Laravel API backend
- Employer portal
- Job Seeker portal
- Recruitment workflow management
- Employer subscription system
- Job seeker monetization controls
- AI recruitment tools
- Optional employer-owned AI API integration
- Multi-currency payments
- Notification and communication automation
- Internal, recommended and third-party candidate/job data
- Interview scheduling
- Offer letter generation
- Recruitment analytics

The most important design principle is:

Every commercial, AI, communication and candidate-access feature must be controlled from the Admin Panel.

The system must also remain usable when Admin does not provide a platform-wide AI subscription.

2. MAIN USER TYPES

The platform will contain three primary user groups.

A. Admin / Super Admin

Controls the complete platform.

B. Employer / Company

Posts jobs, manages candidates, communicates with applicants, schedules interviews and completes hiring.

C. Job Seeker

Searches jobs, creates resume, applies, receives recommendations, tracks interviews and receives offers.

Additional internal roles can be created later.

3. CENTRAL FEATURE CONTROL SYSTEM

Admin will have a dedicated:

Settings → Feature Control

Every major feature should have an ON/OFF switch.

Examples:

- AI Resume Builder
- AI Resume Matching
- AI Job Recommendations
- AI Employer Candidate Matching
- AI Email Generator
- AI Interview Letter Generator
- AI Offer Letter Generator
- AI Chatbot
- AI Voice Interview
- Resume Parser
- WhatsApp
- Email Automation
- Push Notifications
- Third-Party Candidate Data
- Third-Party Job Listings
- Job Seeker Payment
- Paid Job Applications
- Employer Subscription
- Google Calendar
- Candidate Phone Visibility
- Candidate Email Visibility
- Employer Contact Credits
- Resume Download
- Export Candidate Data

If Admin switches a feature OFF, it should disappear from Website/App unless the employer has permission to use its own configuration, as explained below.

4. TWO-TIER AI MODEL

A better architecture for Lucky Boss is to support two AI modes.

MODE 1 – Lucky Boss AI

Lucky Boss pays for and provides the AI API.

Example:

OpenAI API key belongs to Lucky Boss.

Admin creates packages such as:

Basic

No AI.

Professional

Limited AI.

Premium

Full AI.

Enterprise

High AI usage.

Employer purchases a package.

The system checks package entitlement before every AI action.

Example:

Employer Package: Professional

Included:

- 100 AI Candidate Matches
- 50 AI Emails
- 30 AI Interview Letters
- 20 AI Offer Letter Drafts

After limit:

Employer must upgrade or purchase additional credits.

5. MODE 2 – EMPLOYER OWN AI API KEY

Yes, this is technically possible and recommended as an optional feature.

An employer can provide its own OpenAI or other supported AI API key.

This may be called:

Bring Your Own AI Key – BYOAI

This means Lucky Boss does not pay for that employer's AI usage.

Example:

Admin AI = OFF

Employer AI = Configured

Result:

Employer can still access approved AI functionality using its own API credentials.

6. IMPORTANT RULE FOR EMPLOYER OWN AI

This must not mean every employer automatically receives AI functionality.

Admin should have another control:

Allow Employer Own AI API

ON / OFF

If OFF:

Employers cannot add their own API keys.

If ON:

Eligible employers can configure their own API.

Admin may make this:

- Available to all employers
- Available only to selected company types
- Available only to selected company grades

- Available only inside certain subscription plans
- Manually enabled company-by-company

7. RECOMMENDED AI ACCESS DECISION

Whenever an employer uses an AI feature, the system checks:

```
Is AI feature globally allowed?  
  ↓  
Does employer package include Lucky Boss AI?  
  ↓ YES  
Use Lucky Boss AI allocation  
  ↓ NO  
Does employer have permission for BYOAI?  
  ↓  
Does employer have valid API credentials?  
  ↓ YES  
Use employer's own AI account  
  ↓ NO  
Hide / disable AI feature
```

This provides maximum flexibility.

8. EXAMPLE AI PACKAGE LOGIC

Assume:

Admin creates:

Starter

AI Support: NO

BYOAI: YES

Professional

Lucky Boss AI: YES

BYOAI: YES

Enterprise

Lucky Boss AI: YES

High AI Limits

BYOAI: YES

Now:

Company A

Starter Package

Lucky Boss AI unavailable.

But Company A adds its own OpenAI API key.

AI features become available using Company's own API.

Company B

Professional Package

Uses Lucky Boss AI.

No need to add own API key.

Company C

Starter Package

No own API.

AI features remain unavailable.

9. AI PROVIDER PRIORITY

Employer settings can contain:

Preferred AI Provider

- Lucky Boss AI
- Own API
- Automatic

Automatic mode can use:

1. Lucky Boss AI credits first
2. Employer AI after Lucky Boss credits expire

or alternatively Admin may configure:

1. Employer AI first
 2. Lucky Boss AI fallback
-

10. EMPLOYER AI API SETTINGS

Employer Portal:

Settings → AI Configuration

Fields:

- AI Provider
- API Key
- Model
- Status
- Test Connection
- Last Connection Status
- Usage Information
- Save

Example providers:

- OpenAI
- Google Gemini
- Anthropic
- Other future supported providers

Initially, Lucky Boss can support OpenAI only and add additional providers later.

11. AI API SECURITY

Employer API keys must never be exposed to Flutter App or browser JavaScript.

Correct architecture:

```
graph TD
    Employer --> Laravel_Server[Laravel Server]
    Laravel_Server --> Encrypted_API_Credential[Encrypted API Credential]
    Encrypted_API_Credential --> OpenAI_AI_Provider[OpenAI / AI Provider]
```

The employer key must:

- Be stored encrypted
- Be decrypted only server-side
- Never appear in page source
- Never be returned through APIs
- Never be stored in app local storage

- Be accessible only to authorized company administrators

12. PACKAGE-BASED AI MODULE ACCESS

Admin must be able to configure AI features individually.

Example package:

AI Feature	Starter	Professional	Enterprise
AI Resume Match	No	Yes	Yes
AI Candidate Ranking	No	Yes	Yes
AI Email Draft	No	Yes	Yes
AI Interview Letter	No	20	Unlimited
AI Offer Letter	No	10	Unlimited
AI Chat	No	Yes	Yes
AI Candidate Search	No	100	Unlimited
Own API Key	Yes	Yes	Yes

These values must be configurable from Admin.

13. THREE CANDIDATE TABLES FOR EMPLOYER

For every job posting the employer must see three main candidate tables.

This should be one of the most important screens in the employer portal.

14. TABLE 1 – ORGANIC APPLICANTS

Candidates who directly applied for the employer's job.

Required columns:

Candidate	Match %	Experience	Skills	Location	Phone	Email	Applied Date	Status	Action
-----------	---------	------------	--------	----------	-------	-------	--------------	--------	--------

Example:

| Arun | 94% | 5 Years | 8/10 | Singapore | +65 XXXX | arun@email.com | 20 Aug | Applied | Actions |

Phone and email should be shown based on package permission and candidate privacy rules.

15. TABLE 2 – LUCKY BOSS RECOMMENDED CANDIDATES

Candidates already available inside Lucky Boss database who match the job.

Required columns:

Candidate	Match %	Experience	Skills	Location	Phone	Email	Availability	Source	Status	Action
-----------	---------	------------	--------	----------	-------	-------	--------------	--------	--------	--------

Source:

Lucky Boss Candidate Database

These candidates may not have applied for this job.

Employer can contact them if the employer package permits candidate contact access.

16. TABLE 3 – EXTERNAL / THIRD-PARTY CANDIDATE DATA

External candidate information from authorized data providers, partner feeds, employer-imported databases or legally permitted sources.

Required columns:

Candidate	Match %	Experience	Skills	Location	Phone	Email	Source	Collected Date	Status	Action
-----------	---------	------------	--------	----------	-------	-------	--------	----------------	--------	--------

The Source field is mandatory.

Example:

- Recruitment Partner
- Authorized Candidate Feed
- Employer Import
- Public Candidate Source where permitted

Do not hide where the candidate came from.

17. PHONE & EMAIL QUICK CONTACT

Tables 1, 2 and 3 should support quick-contact fields.

Phone:

Click phone number

→ Mobile App can open call dialer.

Email:

Click email

→ Open communication popup.

Desktop:

Click phone

→ Copy Phone / Open supported calling option.

Click Email

→ Compose email.

18. ACTION BUTTON

Each candidate row should have one main:

Actions

Dropdown/menu.

Actions may include:

- View Candidate
- View Resume
- Call
- Send Email
- Send WhatsApp
- Send Portal Message
- Shortlist
- Send Interview Schedule
- Schedule Interview
- Move to Next Round
- Send Assessment
- Generate Interview Letter
- Generate Offer Letter
- Add Internal Note
- Change Status

- Archive Candidate

Actions depend on candidate status and package permissions.

19. SEND INTERVIEW SCHEDULE ACTION

Employer clicks:

Actions

→ Send Interview Schedule

Popup appears:

Interview Information

- Candidate
- Job
- Date
- Start Time
- End Time / Duration
- Time Zone
- Interview Type
- Venue
- Google Meet
- Zoom
- Phone
- Other
- Interviewer
- Notes
- Reminder Timing

Buttons:

- Save
 - Send Invitation
 - Save & Add to Google Calendar
-

20. INTERVIEW NOTIFICATION

Once interview is scheduled:

Candidate receives:

- App Push Notification
- Email
- WhatsApp if enabled
- Portal Notification

Employer receives confirmation.

Admin can also receive an activity notification if required.

21. ARCHIVE CANDIDATE

Each row includes:

Actions

→ Archive Candidate

Employer may enter optional:

Archive Reason

- Not Suitable
- Experience Mismatch
- Salary Issue
- Location Issue
- Candidate Not Responding
- Position Filled
- Duplicate
- Future Consideration
- Other

Archived candidate should not completely disappear.

22. ARCHIVED CANDIDATES DISPLAY

Your preferred design can be implemented as follows.

At bottom of each candidate table:

Archived Candidates

Collapsed by default.

Example:

Active Candidates - 36

[Active Table]

Archived Candidates - 12
▼ View Archived Candidates

Employer clicks.

Archived candidates appear beneath the active table.

Columns remain:

- Candidate
- Phone
- Email
- Match
- Archive Reason
- Archived Date
- Archived By
- Action

Actions:

- Restore Candidate
- View
- Contact
- Delete from Employer View if permitted

23. IMPORTANT ARCHIVE RULE

Archive should not delete the global candidate.

It only removes that candidate from the active workflow for that particular:

Company + Job.

Candidate still remains inside Lucky Boss candidate database.

This is important.

24. BULK ACTIONS

Employer should also be able to select multiple candidates.

Checkboxes.

Bulk Actions:

- Shortlist

- Send Email
- Send Interview Invitation
- Assign Recruiter
- Add Tag
- Archive

Bulk actions should respect package limits.

25. MATCH SCORE VISUAL

Instead of displaying only plain percentages, use visual indicators.

Example:

94% Excellent Match

82% Strong Match

68% Moderate Match

45% Low Match

Employer can click percentage to understand why.

26. MATCH EXPLANATION

Example:

Candidate Match – 92%

Skills: 95%

Experience: 90%

Education: 80%

Location: 100%

Salary: 85%

Availability: 100%

AI Notes:

"Candidate has strong warehouse supervisory experience and matches 8 of 9 required skills."

If AI is disabled:

Use rule-based explanation instead.

27. NO-AI MATCHING FALLBACK

AI should never be mandatory for candidate matching.

Fallback score:

Skills	35%
Experience	20%
Job Category	10%
Education	10%
Location	10%
Salary	5%
Availability	5%
Other	5%

Admin can change weights.

This provides matching even without OpenAI.

28. JOB SEEKER THREE-TABLE DASHBOARD

Job Seeker dashboard should similarly be structured.

TABLE 1 – My Applied Jobs

Columns:

- Job
- Company
- Match %
- Applied Date
- Current Status
- Interview
- Action

TABLE 2 – Recommended Lucky Boss Jobs

Columns:

- Job
- Company
- Location
- Salary
- Match %
- Closing Date
- Apply

TABLE 3 – External Jobs

Controlled by Admin.

Columns:

- Job
- Employer/Source
- Location
- Salary
- Source
- Posted Date
- Action

If Admin turns external jobs OFF:

Table 3 disappears completely.

29. JOB SEEKER MINIMUM REGISTRATION

Stage 1:

- Name
- Phone
- Email
- Password

Optional:

- Country

This allows fast signup.

30. AFTER QUICK REGISTRATION

Job seeker can immediately:

- Search jobs
- Save jobs
- Apply where basic profile is sufficient

Dashboard prominently shows:

Your Profile is 25% Complete

"Complete your full resume to improve job matching and increase employer visibility."

31. COMPLETE RESUME PROFILE

Full profile includes:

- Personal Information
 - Professional Summary
 - Job Category
 - Job Subcategory
 - Industry
 - Current Position
 - Total Experience
 - Skills
 - Education
 - Employment History
 - Certification
 - Languages
 - Preferred Location
 - Preferred Salary
 - Notice Period
 - Availability
 - Work Permit Information
 - Resume
 - Profile Photo
-

32. AI RESUME BUILDER LOGIC

Three cases:

CASE 1

Lucky Boss AI Enabled + Candidate Entitled

Use Lucky Boss AI.

CASE 2

Lucky Boss AI Disabled

Candidate manually creates resume.

CASE 3

Future Candidate BYOAI

Possible technically, but I recommend not introducing candidate-owned API keys in Version 1.

Employer BYOAI has clear business value.

Candidate BYOAI adds unnecessary complexity for normal job seekers.

It can be added later if required.

33. EMPLOYER SUBSCRIPTION ARCHITECTURE

Package configuration must support:

- Company Type
 - Company Grade
 - Country
 - Currency
 - Employer Users
 - Active Jobs
 - Job Posting Limit
 - Candidate View Limit
 - Resume Download Limit
 - Contact View Limit
 - Email Limit
 - WhatsApp Limit
 - Interview Limit
 - Featured Jobs
 - AI Features
 - AI Usage
 - External Candidate Access
 - Reporting
 - Validity
-

34. COMPANY TYPE

Examples:

- Recruitment Agency
- Construction
- Manufacturing
- Logistics
- Warehouse
- Healthcare
- Hospitality
- Maid Agency
- Domestic Worker Agency
- IT
- Retail
- SME
- Enterprise

Admin manages master.

35. COMPANY GRADE

Independent from Company Type.

Examples:

- Standard
- Silver
- Gold
- Premium
- Corporate
- Enterprise

Example:

Industry: Construction

Grade: Enterprise

Package: Construction Enterprise Plan

36. PACKAGE FILTER DURING REGISTRATION

Employer signs up.

Select:

Country
Company Type

System identifies:

Available Packages.

Admin may additionally manually assign Company Grade after verification.

37. MANUAL PACKAGE ASSIGNMENT

Admin can override everything.

Example:

Company: ABC Pte Ltd

Admin selects:

Enterprise Custom

Start: 20 Aug

Expiry: 20 Nov

Amount: SGD 0

Reason: Promotional Trial

38. EXPIRY CONTROL

When company subscription expires:

Company login remains available.

Accessible:

- Company Profile
- Account Settings
- Subscription
- Billing
- Payment History
- Renewal

Restricted:

- Job Applications
- Candidate Contacts
- Candidate Resumes
- Interview History
- Candidate Database
- Old recruitment workflow

Banner:

Subscription Expired

"Renew your subscription to access recruitment data and continue hiring."

39. EMPLOYER ROLE MANAGEMENT

Company Admin creates internal staff.

Roles:

- Company Admin
- HR Manager
- Recruiter
- Interviewer
- Hiring Manager
- Finance
- Viewer

Permission examples:

Recruiter:

- View assigned jobs
- View candidates
- Contact candidates
- Schedule interviews

Finance:

- View invoices
- Renew package

No candidate access.

40. COMPANY IDENTITY LOCK

Company Name should never be manually changed inside official employer communications.

Auto-generated fields:

```
{{company_name}}  
{{company_logo}}  
{{company_address}}  
{{company_phone}}  
{{company_email}}
```

Used in:

- Interview Letters
- Offer Letters
- Emails
- Joining Letters
- Candidate Messages

Company-specific data is pulled from verified company profile.

41. OFFER LETTER

Employer selects:

Actions

→ Generate Offer Letter

Fields:

- Candidate
- Position
- Salary
- Currency
- Joining Date
- Work Location
- Probation
- Reporting Manager
- Benefits
- Conditions

Company Name:

Locked.

42. OFFER LETTER MODES

Standard Template

System-generated template.

Employer Template

Company uses approved custom template.

AI Template

AI prepares draft.

Employer must review before sending.

43. EMAIL COMPOSER

Employer may select candidate.

Actions
→ Email

Composer contains:

To: Candidate Email

Template:

- Shortlisting
- Interview
- Follow Up
- Rejection
- Offer
- Custom

Employer can:

- Send Now
 - Schedule Email
-

44. SCHEDULE EMAIL

Fields:

- Send Date
- Send Time
- Time Zone
- Template
- Subject
- Content
- Attachment

System sends automatically at requested time.

45. GOOGLE CALENDAR

Calendar permission requested only when necessary.

Employer:

Schedule Interview

↓

Add to Google Calendar

↓

OAuth Permission

↓

Calendar Connected

Event Created

Event contains:

- Candidate
- Job
- Date
- Time
- Venue/Meeting Link
- Interviewer

46. EMPLOYER CANDIDATE STATUS

Recommended statuses:

- New
- Viewed
- Contacted
- Shortlisted
- Interview Scheduled
- Interviewed
- Second Interview
- Assessment
- Hold
- Selected
- Offer Prepared
- Offer Sent
- Offer Accepted
- Offer Rejected
- Joined
- Rejected
- Archived

Admin can create custom statuses.

47. CUSTOM NOTIFICATION SOUND SYSTEM

This can be supported in the Flutter applications.

You requested separate/custom sounds for:

- Admin
- Employer
- Job Seeker

Recommended implementation is not only user-role based, but also notification-type based.

48. JOB SEEKER NOTIFICATION SOUNDS

Possible categories:

New Job Match

Sound: job_match

Application Update

Sound: application_update

Interview Alert

Sound: interview_alert

Offer Received

Sound: offer_alert

Payment

Sound: payment_alert

This helps users identify important notifications without opening the app.

49. EMPLOYER NOTIFICATION SOUNDS

Examples:

New Candidate Applied

new_candidate

High Match Candidate

high_match

Interview Reminder

interview_reminder

Candidate Accepted Offer

offer_accepted

Subscription Expiry

subscription_alert

50. ADMIN NOTIFICATION SOUNDS

Examples:

New Company Registration

company_register

Payment Received

payment_received

Support Query

support_query

API Failure

system_alert

Subscription Expiry

subscription_expiry

Job Waiting Approval

approval_alert

51. CUSTOM SOUND SETTINGS

Admin master settings can define:

Notification	Admin	Employer	Job Seeker
New Registration	Sound A	-	-
New Applicant	-	Sound B	-
Interview	-	Sound C	Sound D

Notification	Admin	Employer	Job Seeker
Offer	-	Sound E	Sound F
Payment	Sound G	Sound G	Sound G
System Error	Sound H	-	-

52. USER NOTIFICATION PREFERENCES

Users can optionally choose:

- Sound ON/OFF
- Push Notification ON/OFF
- Email ON/OFF
- WhatsApp ON/OFF

Some mandatory transactional messages can remain enabled where required.

53. CUSTOM SOUND TECHNICAL NOTE

Flutter applications can include different notification sounds.

For Android:

Notification Channels should be created for categories such as:

- Applications
- Interviews
- Offers
- Payments
- System

For iOS:

Bundled notification sounds can be configured.

For Web Admin:

Browser notification sound can also be added while Admin dashboard is open, subject to browser permission/autoplay limitations.

54. ADMIN REAL-TIME ALERT CENTER

Admin dashboard should include a notification bell.

Examples:

 12

Click:

- 3 New Companies
- 4 Jobs Awaiting Approval
- 2 Payments
- 1 API Failure
- 2 Support Queries

Critical alerts can also trigger a distinct sound.

55. EMPLOYER REAL-TIME ALERT CENTER

Notification bell examples:

- New Candidate Applied
 - Candidate Replied
 - Interview Today
 - Candidate Accepted Offer
 - Package Expiring
 - AI Credit Low
-

56. JOB SEEKER REAL-TIME ALERT CENTER

Examples:

- New Matching Job
 - Employer Viewed Application
 - Shortlisted
 - Interview Scheduled
 - Interview Reminder
 - Offer Received
 - Payment Confirmation
-

57. HOME PAGE MANAGEMENT

Admin can control everything without coding.

Sections:

1. Slider

2. Search Bar
3. Job Categories
4. Featured Jobs
5. Latest Jobs
6. Apply Soon
7. Featured Companies
8. Specializations
9. Statistics
10. Testimonials
11. Blogs
12. App Download
13. Chat / Help
14. Footer

58. JOB CATEGORY DISPLAY ORDER

Admin master:

Category	Icon	Order	Web	App
Construction	icon	1	ON	ON
Manufacturing	icon	2	ON	ON
Warehouse	icon	3	ON	ON

Admin can choose only 12 to show on home page.

Other categories still remain searchable.

59. SPECIALIZATIONS SECTION

Example:

Our Specializations & Key Industry Expertise

Cards:

- Maid & Caregiver
- Construction Worker
- Manufacturing Labour
- Warehouse Manpower
- Logistics
- Healthcare
- Hospitality
- IT
- Engineering

- Retail
- Administration
- Work Permit Services

Each card:

- Icon
 - Image
 - Name
 - Description
 - Link
 - Display Order
-

60. WEBSITE SLIDER & APP SLIDER

Admin can create one slider record and choose:

- Website
- App
- Both

Fields:

- Desktop Image
 - Mobile Image
 - Heading
 - Description
 - Button
 - Link
 - Start Date
 - End Date
 - Sort Order
-

61. JOB PROMOTION

Employer posts normal job.

Admin can make it:

- Featured
- Urgent
- Sponsored
- Apply Soon
- Paid Apply

Set:

- Start Date
- End Date
- Priority
- Home Page Position

62. JOB SEEKER PAYMENT

Admin setting:

Candidate Monetization

OFF

Initially all standard applications remain free.

Later Admin switches:

ON

Then Admin can define which jobs require payment.

63. PAID APPLY JOB

Job-level settings:

Paid Apply = YES
Currency = SGD
Application Fee = 5

Candidate clicks:

Apply

↓

Payment Required

↓

Gateway

↓

Success

↓

Application Created

↓

Receipt Generated

64. MULTI-CURRENCY

Supported initially:

- SGD
- INR
- MYR

Expandable later.

Admin should manually configure prices.

Example package:

Professional

SGD 299

INR 18,000

MYR 999

This is better than forcing real-time currency conversion.

65. JOB SEEKER PURCHASE HISTORY

Fields:

- Date
 - Transaction ID
 - Job
 - Company
 - Amount
 - Currency
 - Gateway
 - Status
 - Invoice/Receipt
-

66. EMPLOYER PAYMENT HISTORY

Includes:

- Package
- Credits
- Featured Job
- Add-On
- Candidate Credits

- AI Credits
-

67. AI USAGE ACCOUNTING

Every AI call should record:

- Employer
- User
- Job
- Candidate
- Feature
- AI Provider
- Lucky Boss API / Employer API
- Model
- Tokens
- Estimated Cost
- Date
- Status

This is critical for billing and auditing.

68. API FAILURE LOG

Admin should see:

- Provider
- Company
- API
- Error
- Date
- Request Type

Optional:

Push + Sound Alert.

Example:

"OpenAI API quota exceeded."

69. THIRD-PARTY JOBS

Admin:

Third-Party Jobs = ON/OFF

If ON:

Job seekers can see external job opportunities.

Each job must show source.

Example:

Source: Approved Recruitment Partner

Do not design the business model around unauthorized scraping.

70. THIRD-PARTY CANDIDATES

Likewise:

Admin:

External Candidate Data = ON/OFF

Package can additionally control access.

Example:

Starter: No external candidates.

Professional: 100 external records/month.

Enterprise: Unlimited/Custom.

71. CANDIDATE CONTACT ACCESS

Phone and email access should also be package-controlled.

Example:

Starter:

20 contact views/month.

Professional:

250.

Enterprise:

Custom.

Whenever employer reveals protected contact:

System records credit usage.

72. CONTACT VIEW SECURITY

To avoid employers opening every candidate simply to collect contacts:

Before revealing phone/email, system may optionally show:

Reveal Contact

This will use 1 candidate contact credit.

Continue?

After confirmation:

Phone and Email appear.

For Organic Applicants, Admin may choose to show contact immediately without consuming credits.

This should be configurable.

73. RECOMMENDED ORGANIC APPLICANT RULE

For people who directly applied:

Phone: Visible

Email: Visible

Because the candidate intentionally applied to the employer.

For system-recommended candidates:

May consume contact credit.

For third-party candidates:

Access according to source agreement and package.

74. CONTACT ACTIVITY LOG

Employer candidate record should show:

- Phone viewed by
- Email viewed by
- Email sent by
- Interview sent by
- Status changed by
- Archived by

This improves auditability.

75. EMPLOYER NOTES

Recruiters can add private company notes.

Example:

"Candidate called on 20 Aug. Available after 30 days."

Notes are visible only to company-authorized users.

76. ASSIGN RECRUITER

Company Admin can assign candidates or jobs to individual recruiters.

Example:

Job: Warehouse Supervisor

Assigned Recruiter: John

Recruiter John receives notification.

77. RECRUITMENT KANBAN + TABLE

Although your preferred primary method is Table View, I recommend also supporting optional Kanban View later.

Primary:

Table View.

Optional:

New → Shortlisted → Interview → Offered → Hired

Users can switch views.

78. EMPLOYER DASHBOARD

Cards:

- Active Jobs
 - New Applicants
 - Recommended Candidates
 - Interviews Today
 - Offers Pending
 - Hired
 - Remaining Contact Credits
 - Remaining AI Credits
 - Subscription Expiry
-

79. ADMIN DASHBOARD

Cards:

- Total Companies
 - Active Subscriptions
 - Expiring Companies
 - Total Job Seekers
 - Active Jobs
 - Applications Today
 - Paid Applications
 - Employer Revenue
 - Candidate Revenue
 - AI Cost
 - API Failures
 - Jobs Waiting Approval
-

80. JOB SEEKER DASHBOARD

Cards:

- Profile Completion
- Applied Jobs

- Matching Jobs
- Saved Jobs
- Interviews
- Offers

Sections:

My Applications
Recommended Jobs
External Jobs
Purchase History
Resume
Notifications

81. CHATBOT LOGIC

Floating bottom-right icon.

AI Enabled

AI Assistant.

Can help with:

- Job Search
- Resume
- FAQ
- Application Process

AI Disabled

Button changes to:

Need Help?

Form:

- Name
- Phone
- Email
- Query

Submission:

"Our recruitment support team will contact you as soon as possible."

Admin receives support alert with customized sound.

82. ADMIN BLOG

Fields:

- Title
- Slug
- Category
- Image
- Content
- SEO Title
- Meta Description
- Keywords
- Status
- Publish Date

App and Website use same content.

83. SEARCH

Search filters:

- Keyword
 - Job Title
 - Category
 - Subcategory
 - Skills
 - Location
 - Country
 - Salary
 - Experience
 - Industry
 - Work Type
 - Work Mode
 - Posted Date
 - Employer
-

84. SAVED SEARCH

Job seekers can create saved job searches.

Example:

Warehouse + Singapore + SGD 2500+

When new matching job is posted:

Push Notification.

85. NOTIFICATION ENGINE

Central notification service.

Triggers:

System Event

↓

Check User Preference

↓

Check Admin Setting

↓

Choose Channel

↓

Send

Channels:

- Push
- Email
- WhatsApp
- In-App
- SMS future

86. DATABASE AREAS

Major tables should include:

- users
- roles
- permissions
- companies
- company_types
- company_grades
- employer_users
- employer_ai_settings
- packages
- package_features
- subscriptions
- usage_counters
- candidate_profiles
- candidate_resumes
- candidate_experience
- candidate_education

- candidate_skills
- jobs
- applications
- candidate_matches
- external_candidates
- external_jobs
- candidate_contacts
- candidate_archives
- candidate_notes
- interviews
- interview_attendees
- interview_feedback
- offers
- email_templates
- communications
- notifications
- notification_preferences
- currencies
- payments
- invoices
- feature_flags
- api_settings
- api_usage_logs
- ai_usage_logs
- sliders
- categories
- blogs
- audit_logs

87. CANDIDATE ARCHIVE TABLE LOGIC

Recommended:

```
candidate_archives
```

```
id  
company_id  
job_id  
candidate_id  
archived_by  
reason  
remarks  
archived_at

"Archived Candidates"

Restore Available

90. RECOMMENDED TABLE HEADER

For all three employer candidate tables:

[] Candidate
Match

Experience
Skills
Location
Phone
Email
Source
Status
Last Activity
Actions

Table 1 source automatically:

Direct Applicant.

Table 2:

Lucky Boss Database.

Table 3:

External source name.

91. DATA EXPORT

Depending on package:

Employer can export:

- Shortlisted Candidates
- Interview Candidates
- Hired Candidates

Formats:

- Excel
- CSV
- PDF

Sensitive contact export should be permission-controlled.

92. SECURITY

Required:

- Laravel authentication
- API authentication

- Role-based authorization
- Company-level data segregation
- Encrypted employer API credentials
- Payment webhook verification
- API rate limiting
- Login activity
- Audit logs
- OTP option
- Email verification
- Secure file upload
- Resume validation
- Database backup
- Server-side feature validation

93. IMPORTANT SERVER-SIDE CONTROL

Do not only hide an AI button in Flutter.

Example:

Package does not include AI.

Even if someone manually calls:

```
/api/generate-offer-ai
```

Laravel must reject the request.

Every entitlement must be validated server-side.

94. RECOMMENDED AI ACCESS LOGIC

↓ ↓
Use Own AI Deny

Admin may optionally allow BYOAI even when Lucky Boss's platform AI master switch is OFF.

Therefore I recommend separating these switches:

Platform AI Services = ON/OFF
Employer BYOAI = ON/OFF

Do not use one single AI master switch for both.

This provides better control.

95. RECOMMENDED FINAL AI SETTINGS

Admin:

Global AI

- Allow AI Features
- Lucky Boss AI Provider
- Lucky Boss API Status

Employer-Owned AI

- Allow BYOAI
- Eligible Packages
- Eligible Company Grades
- Eligible AI Features

Feature-Specific

- Resume AI
- Matching AI
- Email AI
- Interview AI
- Offer AI
- Chat AI

This is the strongest architecture.

96. PLATFORM-WIDE FLOW

97. DEVELOPMENT RECOMMENDATION

The Laravel backend should be treated as the central brain.

Website and Flutter should not independently decide:

- whether AI is enabled
- whether payment is required
- whether candidate contact can be shown
- whether external candidates are allowed
- whether package has expired

Instead:

Flutter / Website

↓

Laravel API

↓

Checks Admin Settings

↓

Checks Package

↓

Checks Company Permission

↓

Checks Usage Limit

↓

Returns Available Features

This prevents inconsistent behaviour between Website and App.

98. RECOMMENDED VERSION 1 PRIORITIES

Core

- Admin
- Employer
- Job Seeker
- Job Categories
- Job Posting
- Job Search
- Applications
- 3 Candidate Tables
- Candidate Phone/Email
- Candidate Actions
- Archive
- Interview Scheduling
- Offer Letter
- Subscription
- Multi-Currency
- Payments
- Notifications
- Custom Sounds

AI

- Resume Parser
- AI Matching
- AI Email
- AI Interview Letter
- AI Offer Letter
- Employer BYOAI

- Package AI Entitlements

Phase 2 / Optional

- Voice AI
 - Advanced third-party feeds
 - Assessment engine
 - Video interview
 - Recruitment CRM
 - Work permit services
-

99. FINAL RECOMMENDATION

For Lucky Boss Portal, I strongly recommend this commercial model:

Platform AI

Lucky Boss provides AI only to packages that include AI.

Employer-Owned AI

Eligible companies can connect their own API key when:

- their package does not include Lucky Boss AI,
- their Lucky Boss AI allowance is finished,
- or they prefer their own account.

Admin Control

Admin retains final control over:

- whether BYOAI is allowed,
- which packages can use it,
- which AI functions are available,
- and which companies are authorized.

This gives Lucky Boss the ability to sell AI as a premium product without preventing advanced companies from paying AI providers directly.

100. FINAL EMPLOYER CANDIDATE EXPERIENCE

For every job:

1. Direct Applicants

Phone + Email + Match + Status + Action

2. Lucky Boss Recommended Candidates

Phone + Email + Match + Status + Action

3. External Candidates

Phone + Email where authorized + Source + Match + Status + Action

Actions:

- Call
- Email
- WhatsApp
- Shortlist
- Schedule Interview
- Send Interview Letter
- Add Note
- Change Status
- Generate Offer
- Archive

At the bottom:

Archived Candidates

All archived records remain visible and can be restored.

This creates a simple recruitment workflow while still providing powerful AI, automation, subscription and candidate-data capabilities.
